

GEO 151: Geography and Contemporary Society

Elements of population geography and urban studies, economic geography and resource management; application to current problems of developed and underdeveloped countries.

Credits: 3

Lecture Hours: 3

Program: Geography & Environment

Student Learning Outcomes:

- Describe and map major themes in human society and culture: population, economy, politics, language, religion, customs, and conflict.
- Apply scientific method, and theories and concepts of geography to explain the nature, history, and diffusion of the major themes.
- Synthesize cross-cultural perspectives on current issues in the major themes.
- Communicate the achievement in written form and/or in other artistic expressions such as photograph.
